T. Rowe Price International, Inc. managed \$34.1 billion in foreign stocks and bonds as of December 31, 2008, through its offices in Baltimore, London, Singapore, Hong Kong, and Buenos Aires.

Mutual fund shares are not deposits or obligations of, or guaranteed by, any depository institution. Shares are not insured by the FDIC, Federal Reserve, or any other government agency, and are subject to investment risks, including possible loss of the principal amount invested.

T. Rowe Price International Series, Inc.

T. Rowe Price International Stock Portfolio

OBJECTIVE, STRATEGY, RISKS, AND EXPENSES

The fund should be used as an investment option for variable annuity and variable life insurance contracts.

What is the fund's objective?

The fund seeks long-term growth of capital through investments primarily in the common stocks of established, non-U.S. companies.

What is the fund's principal investment strategy?

The fund expects to invest substantially all of its assets in stocks outside the U.S. and to diversify broadly among developed and emerging countries throughout the world. Stock selection reflects a growth style. The fund may purchase the stocks of companies of any size, but its focus will typically be on large and, to a lesser extent, medium-sized companies. Normally, at least 80% of the fund's net assets will be invested in common stocks.

T. Rowe Price International, Inc. (T. Rowe Price International), employs a global team of investment analysts dedicated to in-depth fundamental research in an effort to identify companies capable of achieving and sustaining above-average, long-term earnings growth. We seek to purchase stocks of such companies at reasonable prices in relation to present or anticipated earnings, cash flow, or book value. Valuation factors often influence our allocations among large-, mid-, or small-cap shares.

While the fund invests with an awareness of the global economic backdrop and its outlook for industry sectors and individual countries, bottom-up stock selection is the focus of our decision-making. Country allocation is driven largely by stock selection, though we may limit investments in markets that appear to have poor overall prospects.

In selecting stocks, the fund generally favors companies with one or more of the following characteristics:

- leading or improving market position;
- attractive business niche;
- attractive or improving franchise or industry position;
- seasoned management;
- stable or improving earnings and/or cash flow; and
- sound or improving balance sheet.

While the fund invests primarily in common stocks, the fund may invest in other securities, and may use futures and options, in keeping with the fund's objective.

The fund may sell securities for a variety of reasons, such as to secure gains, limit losses, or redeploy assets into more promising opportunities.

Certain investment restrictions, such as a required minimum or maximum investment in a particular type of security, are measured at the time the fund purchases a security. The status, market value, maturity, credit quality, or other characteristics of the fund's securities may change after they are purchased, and this may cause the amount of the fund's assets invested in such securities to exceed the

stated maximum restriction or fall below the stated minimum restriction. If any of these changes occur, it would not be considered a violation of the investment restriction. However, purchases by the fund during the time it is above or below the stated percentage restriction would be made in compliance with applicable restrictions.

What are the main risks of investing in the fund?

Funds that invest overseas generally carry more risk than funds that invest strictly in U.S. assets. Even investments in countries with highly developed economies are subject to significant risks. Some particular risks affecting this fund include the following:

- **Currency risk** This refers to a decline in the value of a foreign currency versus the U.S. dollar, which reduces the dollar value of securities denominated in that currency. The overall impact on a fund's holdings can be significant, unpredictable, and long-lasting, depending on the currencies represented in the fund's portfolio and how each foreign currency appreciates or depreciates in relation to the U.S. dollar and whether currency positions are hedged. Under normal conditions, the fund does not engage in extensive foreign currency hedging programs. Further, exchange rate movements are volatile, fund attempts at hedging could be unsuccessful, and it is not possible to effectively hedge the currency risks of many developing or emerging countries.
- **Geographic risk** The economies and financial markets of certain regions—such as Latin America and Asia—can be interdependent and may all decline at the same time.
- **Emerging market risk** To the extent the fund invests in emerging markets, it is subject to greater risk than a fund investing only in developed markets. The economic and political structures of developing countries, in most cases, do not compare favorably with the U.S. or other developed countries in terms of wealth and stability, and their financial markets often lack liquidity. Fund performance will likely be hurt by exposure to countries in the midst of hyperinflation, currency devaluation, trade disagreements, sudden political upheaval, or interventionist government policies. Significant buying or selling by a few major investors may also heighten the volatility of emerging markets. These factors make investing in such countries significantly riskier than investing in other countries, and any one of these factors could cause the fund's share price to decline.
- **Other risks of foreign investing** Risks can result from varying stages of economic and political development, differing regulatory environments, trading days, accounting standards, uncertain tax laws, and higher transaction costs of non-U.S. markets. Investments outside the United States could be subject to governmental actions such as capital or currency controls, nationalization of a company or industry, expropriation of assets, or imposition of high taxes. A trading market may close without warning for extended time periods, preventing a fund from selling its portfolio securities in that market.
 - ▶ *While certain countries have made progress in economic growth, liberalization, fiscal discipline, and political and social stability, there is no assurance these trends will continue.*
- **Futures/options risk** To the extent the fund uses futures and options, it is exposed to additional volatility and potential losses.

As with all stock funds, the fund's share price can fall because of weakness in one or more of its primary equity markets, a particular industry, or specific holdings. Stock markets can decline for many reasons, including adverse political or economic developments, changes in investor psychology, or heavy institutional selling. The prospects for an industry or company may deteriorate because of a variety of factors, including disappointing earnings or changes in the competitive environment. In addition, our assessment of companies held in the fund may prove incorrect, resulting in losses or poor performance, even in rising markets.

As with any mutual fund, there can be no guarantee the fund will achieve its objective.

- ▶ *The fund's share price may decline, so when you sell your shares, you may lose money.*

How can I tell if the fund is appropriate for me?

Consider your investment goals, your time horizon for achieving them, and your tolerance for risk. If you want to diversify your domestic stock portfolio by adding foreign investments, seek the long-term capital appreciation potential of growth stocks, and are comfortable with the risks that accompany foreign investments, the fund could be an appropriate part of your overall investment strategy.

- ▶ *The fund should not represent your complete investment program or be used for short-term trading purposes.*

How has the fund performed in the past?

The bar chart showing calendar year returns and the average annual total returns table indicate risk by illustrating how much returns can differ from one year to the next and over time. Past fund performance is no guarantee of future returns.

The fund can also experience short-term performance swings, as shown by the best and worst calendar quarter returns during the years depicted.

Updated performance information is available through troweprice.com or may be obtained by calling 1-800-469-5304.

Table 1 Average Annual Total Returns

	Periods ended December 31, 2008		
	1 year	5 years	10 years
International Stock Portfolio	-48.70%	-1.83%	-1.87%
MSCI All Country World Index ex-US Index	-45.24	3.00	2.27
Lipper Variable Annuity Underlying International Growth Funds Average	-46.61	1.74	1.18

These figures include changes in principal value, reinvested dividends, and capital gain distributions, if any.

Figures do not reflect fees at the insurance product or contract level; if those fees were included, returns would be lower.

MSCI All Country World ex-US Index measures the equity market performance of developed and emerging countries, excluding the U.S.

What fees and expenses will I pay?

The fees and expenses set forth in the following table are paid by the fund and borne indirectly by contract holders. There are additional expenses charged by insurance companies, which apply to your insurance contract or policy, and these are described in the variable annuity and variable life contract prospectuses.

Table 2 Fees and Expenses of the Fund

	<i>Annual fund operating expenses (expenses that are deducted from fund assets)</i>
Management fee	1.05%
Other expenses	—
Total annual fund operating expenses	1.05%

Example. The following table gives you an idea of how expense ratios may translate into dollars and helps you to compare the cost of investing in this fund with that of other mutual funds. Although your actual costs may be higher or lower, the table shows how much you would pay if operating expenses remain the same, you invest \$10,000, earn a 5% annual return, hold the investment for the following periods, and then redeem:

<i>1 year</i>	<i>3 years</i>	<i>5 years</i>	<i>10 years</i>
\$107	\$334	\$579	\$1,283

OTHER INFORMATION ABOUT THE FUND

What are some of the potential rewards of investing overseas through the fund?

Investing abroad increases the opportunities available to you. Some foreign countries may have greater potential for economic growth than the U.S. Investing a portion of your overall portfolio in foreign stock funds can enhance your diversification while providing the opportunity to increase long-term returns.

How does the portfolio manager try to reduce risk?

The principal tools we use to try to reduce risk are intensive research and limiting exposure to any one industry or company. Currency hedging techniques may be used from time to time.

Portfolio managers keep close watch on individual investments as well as on political and economic trends in each country and region. Holdings are adjusted according to the manager's analysis and outlook.

The impact on the fund's share price from a drop in the price of a particular stock is reduced substantially by investing in a diversified portfolio that invests in many different companies. Likewise, the impact of unfavorable developments in a particular country is reduced when investments are spread among many countries. However, the economies and financial markets of countries in a certain region may be influenced heavily by one another and the global economy.

Is there other information I can review before making a decision?

Investment Policies and Practices in Section 3 discusses various types of portfolio securities the fund may purchase as well as types of management practices the fund may use.

The Statement of Additional Information contains more detailed information about the fund and its investments, operations, and expenses.

As an investor in a T. Rowe Price fund through your variable annuity or variable life insurance contract, you will want to know about the following policies and procedures that apply to the funds. For instructions on how to purchase and redeem shares, read the insurance contract prospectus.

PRICING SHARES AND RECEIVING SALE PROCEEDS

Shares of the fund are designed to be offered to insurance company separate accounts established for the purpose of funding variable annuity and life insurance contracts. Variable annuity and variable life contract holders or participants are not the shareholders of the fund. Rather, the separate account of the insurance company is the shareholder. The variable annuity and variable life contracts are described in separate prospectuses issued by the insurance companies. The fund assumes no responsibility for such prospectuses, or variable annuity or variable life contracts.

Shares of the fund are sold and redeemed without the imposition of any sales commission or redemption charge. However, certain other charges may apply to annuity or life contracts. Those charges are disclosed in the insurance contract prospectus.

Your ability to exchange from this fund to any other T. Rowe Price fund that serves as an investment option under your insurance contract is governed by the terms of that contract and the insurance contract prospectus, as well as the fund's excessive trading policy described in this section.

How and When Shares Are Priced

The share price (also called "net asset value" or NAV per share) for a fund is calculated at the close of the New York Stock Exchange, normally 4 p.m. ET, each day that the exchange is open for business. To calculate the NAV, the fund's assets are valued and totaled, liabilities are subtracted, and the balance, called net assets, is divided by the number of shares outstanding. Market values are used to price stocks and bonds. Market values represent the prices at which securities actually trade or evaluations based on the judgment of the fund's pricing services. If a market value for a security is not available, the fund will make a good faith effort to assign a fair value to the security by taking into account factors that have been approved by the fund's Board of Directors. This value may differ from the value the fund receives upon sale of the securities. Amortized cost is used to price securities held by money market funds and certain other debt securities held by a fund. Investments in mutual funds are valued at the closing NAV per share of the mutual fund on the day of valuation.

Non-U.S. equity securities are valued on the basis of their most recent closing market prices at 4 p.m. ET except under the circumstances described below. Most foreign markets close before 4 p.m. ET. For securities primarily traded in the Far East, for example, the most recent closing prices may be as much as 15 hours old at 4 p.m. ET. If a fund determines that developments between the close of a foreign market and 4 p.m. ET will, in its judgment, materially affect the value of some or all of the fund's securities, the fund will adjust the previous closing prices to reflect what it believes to be the fair value of the securities as of 4 p.m. ET. In deciding whether to make these adjustments, the fund reviews a variety of factors, including developments in foreign markets, the performance of U.S. securities markets, and the performance of instruments trading in U.S. markets that represent foreign securities and baskets of foreign securities. The fund may also fair value securities in other situations, for example, when a particular foreign market is closed but the fund is open. The fund uses outside pricing services to provide it with closing market prices and information used for adjusting those prices. The fund cannot predict how often it will use closing prices and how often it will adjust those prices. As a means of

evaluating its fair value process, the fund routinely compares closing market prices, the next day's opening prices in the same markets, and adjusted prices. Other mutual funds may adjust the prices of their securities by different amounts.

How Your Purchase, Sale, or Exchange Price Is Determined

Purchases

The insurance companies purchase shares of the fund for their separate accounts, using premiums allocated by the contract holders or participants. Shares are purchased at the NAV next determined after the insurance company receives the premium payment in acceptable form. Initial and subsequent payments allocated to the fund are subject to the limits stated in the insurance contract prospectus issued by the insurance company.

When authorized by the fund, certain financial institutions or retirement plans purchasing fund shares on behalf of customers or plan participants through Financial Institution Services or Retirement Plan Services may place a purchase order unaccompanied by payment. Payment for these shares must be received by the time designated by the fund (not to exceed the period established for settlement under applicable regulations). If payment is not received by this time, the order may be cancelled. The financial institution or retirement plan is responsible for any costs or losses incurred by the fund or T. Rowe Price if payment is delayed or not received.

Redemptions

The insurance companies redeem shares of the fund to make benefit or surrender payments under the terms of its contracts. Redemptions are processed on any day on which the New York Stock Exchange is open and are priced at the fund's NAV next determined after the insurance company receives a surrender request in acceptable form.

Note: The time at which transactions and shares are priced and the time until which orders are accepted may be changed in case of an emergency or if the New York Stock Exchange closes at a time other than 4 p.m. ET. There may be times when you are unable to contact us by telephone or access your account by computer due to extreme market activity, the unavailability of the T. Rowe Price Web site, or other circumstances. Should this occur, your order must still be placed and accepted prior to the time the New York Stock Exchange closes to be priced at that business day's NAV.

How You Can Receive the Proceeds From a Sale

Payment for redeemed shares will be made promptly, but in no event later than seven calendar days after receipt of your redemption order. However, the right of redemption may be suspended or the date of payment postponed in accordance with the Investment Company Act of 1940 ("1940 Act"). The amount received upon redemption of the shares of the fund may be more or less than the amount paid for the shares, depending on the fluctuations in the market value of the assets owned by the fund.

Excessive and Short-Term Trading

- ▶ *T. Rowe Price may bar excessive and short-term traders from purchasing shares.*

Excessive or short-term trading in fund shares may disrupt management of a fund and raise its costs. Short-term traders in funds investing in foreign securities may seek to take advantage of an anticipated difference between the price of the fund's shares and price movements in overseas markets (see Pricing Shares and Receiving Sale Proceeds—How and When Shares Are Priced). While there is no assurance that T. Rowe Price can prevent all excessive and short-term trading, the Boards of Directors of the T. Rowe Price funds have adopted the following policies to deter such activity. Persons trading directly with T. Rowe Price or indirectly through intermediaries in violation of this policy or persons believed

to be short-term traders may be barred permanently from further purchases of T. Rowe Price funds. Purchase transactions placed by such persons are subject to rejection without notice. These policies apply to contract holders notwithstanding any provisions in your insurance contract.

- All persons purchasing shares held directly with a T. Rowe Price fund who make more than one purchase and one sale or one sale and one purchase involving the same fund within any 90-day calendar period will violate the policy.
- All persons purchasing fund shares held through an insurance company who hold the shares for less than 90 calendar days will violate the policy.

Omnibus Accounts

Intermediaries often establish omnibus accounts in the T. Rowe Price funds for their customers. In such situations, T. Rowe Price cannot always monitor trading activity by underlying contract holders. However, T. Rowe Price reviews trading activity at the omnibus account level and looks for activity that indicates potential excessive or short-term trading. If it detects suspicious trading activity, T. Rowe Price contacts the intermediary to determine whether the excessive trading policy has been violated and may request and receive personal identifying information and transaction histories for some or all contract holders to make this determination. If T. Rowe Price believes that its excessive trading policy has been violated, it will instruct the intermediary to take action with respect to the underlying contract holder in accordance with the policy.

Exceptions to Policy

Systematic purchases and redemptions are exempt from these policies. Redemptions to fund the periodic deduction of contract charges and fees and to pay death benefits are also exempt. Transactions in certain rebalancing and asset allocation programs may be exempt from the excessive trading policy subject to prior written approval by designated persons at T. Rowe Price. In addition, transactions by certain T. Rowe Price funds in other T. Rowe Price funds, as well as certain transactions by approved accounts managed by T. Rowe Price, may also be exempt.

T. Rowe Price generally seeks to enforce its excessive trading policies against individual contract holders when violations of its policies are discovered. The terms of your insurance contract may also restrict your ability to trade between the investment options available under your contract. T. Rowe Price reserves the right to modify the 90-day policy set forth above and apply your insurance company's excessive trading policy (for example, in situations where an insurance contract or insurance company has restrictions on trading that differ from a T. Rowe Price fund's policy). These modifications would be authorized only if T. Rowe Price believes that the modified policy would provide protection to the fund that is reasonably equivalent to the fund's regular policy. If you are trading your fund shares through an intermediary, you should consult with the intermediary to determine the excessive trading policy that applies to your trades in the fund.

There may be limitations on the ability of insurance companies to impose restrictions on the trading practices of certain contract holders. As a result, T. Rowe Price's ability to discourage excessive trading practices in this fund may be limited.

- ▶ ***There is no guarantee that T. Rowe Price will be able to detect or prevent excessive or short-term trading. In addition, T. Rowe Price cannot always detect excessive or short-term trading through intermediaries with omnibus accounts.***

RIGHTS RESERVED BY THE FUNDS

T. Rowe Price funds and their agents, in their sole discretion, reserve the following rights: (1) to waive or lower investment minimums; (2) to accept initial purchases by telephone or telegram; (3) to refuse any purchase or exchange order; (4) to cancel or rescind any purchase or exchange order placed through an intermediary, no later than the business day after the order is received by the intermediary (including, but not limited to, orders deemed to result in excessive trading, market timing, or 5% ownership); (5) to cease offering fund shares at any time to all or certain groups of investors; (6) to freeze any account and suspend account services when notice has been received of a dispute between the registered or beneficial account owners or there is reason to believe a fraudulent transaction may occur; (7) to otherwise modify the conditions of purchase and any services at any time; (8) to waive any wire fees charged to a group of shareholders; (9) to act on instructions reasonably believed to be genuine; and (10) to involuntarily redeem your account at the net asset value calculated the day the account is redeemed, in cases of threatening conduct, suspected fraudulent or illegal activity, or if the fund or its agent is unable, through its procedures, to verify the identity of the person(s) or entity opening an account.

In an effort to protect T. Rowe Price funds from the possible adverse effects of a substantial redemption in a large account, as a matter of general policy, no contract holder or participant or group of contract holders or participants controlled by the same person or group of persons will knowingly be permitted to purchase in excess of 5% of the outstanding shares of the fund, except upon approval of the fund's management.

DIVIDENDS AND OTHER DISTRIBUTIONS

For a discussion of the tax status of your variable annuity contract, please refer to the insurance contract prospectus.

Dividends and Other Distributions

The policy of the fund is to distribute all of its net investment income and net capital gains each year to its shareholders, which are the separate accounts established by the various insurance companies in connection with their issuance of variable annuity and variable life contracts. Dividends from net investment income are declared daily and paid monthly for the Limited-Term Bond and Prime Reserve Portfolios; declared and paid quarterly for the Equity Income, Equity Index 500, and Personal Strategy Balanced Portfolios; and declared and paid annually for all other portfolios. All fund distributions made to a separate account will be reinvested automatically in additional fund shares, unless a shareholder (separate account) elects to receive distributions in cash. Under current law, dividends and distributions made by the fund to separate accounts generally are not taxable to the separate accounts, the insurance company, or the contract holder, provided that the separate account meets the diversification requirements of Section 817(h) of the Internal Revenue Code of 1986, as amended, (Code) and other tax-related requirements are satisfied. The fund intends to diversify its investments in the manner required under Code Section 817(h).

ORGANIZATION AND MANAGEMENT

How is the fund organized?

T. Rowe Price International Series, Inc. (the “corporation”) was incorporated in Maryland in 1994. Currently, the corporation consists of one series, the International Stock Portfolio.

The International Stock Portfolio is managed in a manner similar to the T. Rowe Price International Stock Fund, a fund with the same investment objective and program as the portfolio but offered to the general public and not to insurance company separate accounts. However, investors should be aware that the International Stock Portfolio is not the same as the fund and will not have the same performance. Investments made by the International Stock Portfolio at any given time may not be the same as those made by T. Rowe Price International Stock Fund. Different performance will result due to factors such as differences in the cash flows into and out of the portfolio and fund, different fees and expenses, and differences in net assets and size of holdings.

What is meant by “shares”?

Contract holders and participants indirectly (through the insurance company separate account) purchase shares when they put money in a fund offered as an investment option in their insurance contracts. These shares are part of a fund’s authorized capital stock, but share certificates are not issued.

Each share and fractional share entitles the shareholder (the insurance company separate account) to cast one vote per share on certain fund matters, including the election of fund directors, changes in fundamental policies, or approval of changes in the fund’s management contract.

The shares of the fund have equal voting rights. The various insurance companies own the outstanding shares of the fund in their separate accounts. These separate accounts are registered under the 1940 Act or are exempted from registration thereunder. Under current law, the insurance companies must vote the shares held in registered separate accounts in accordance with voting instructions received from variable contract holders or participants having the right to give such instructions.

Do T. Rowe Price funds have annual shareholder meetings?

The funds are not required to hold annual meetings and, to avoid unnecessary costs to fund shareholders, do not do so except when certain matters, such as a change in fundamental policies, must be decided. In addition, shareholders representing at least 10% of all eligible votes may call a special meeting for the purpose of voting on the removal of any fund director or trustee. If a meeting is held and you cannot attend, you can vote by proxy. Before the meeting, the insurance company will send or make available to you the fund’s proxy materials that explain the issues to be decided and include instructions on voting.

Who runs the fund?

General Oversight

The fund is governed by a Board of Directors that meets regularly to review fund investments, performance, expenses, and other business affairs. The Board elects the fund’s officers. At least 75% of Board members are independent of T. Rowe Price International.

- ▶ *All decisions regarding the purchase and sale of fund investments are made by T. Rowe Price International—specifically by the fund’s portfolio manager.*

Investment Manager

T. Rowe Price International is responsible for the selection and management of fund portfolio investments. The U.S. office of T. Rowe Price International is located at 100 East Pratt Street, Baltimore, Maryland 21202.

Portfolio Management

T. Rowe Price International has established an Investment Advisory Committee with respect to the fund. The committee members are: Robert W. Smith, Chairman, Christopher D. Alderson, Mark C.J. Bickford-Smith, Richard N. Clattenburg, Henry M. Ellenbogen, Robert N. Gensler, M. Campbell Gunn, Gonzalo Pangaro, Jeffrey Rottinghaus, and Dean Tenerelli. The committee chairman has day-to-day responsibility for managing the fund's portfolio and works with the committee in developing and executing the fund's investment program. Mr. Smith was appointed chairman of the committee in 2007. He joined T. Rowe Price Associates in 1992, T. Rowe Price International in 2007, and his investment experience dates from 1987. The Statement of Additional Information provides additional information about the portfolio manager's compensation, other accounts managed by the portfolio manager, and the portfolio manager's ownership of securities in the fund.

The Management Fee

The fund pays T. Rowe Price International an annual fee that includes investment management services and ordinary, recurring operating expenses, but does not cover interest, taxes, brokerage, nonrecurring or extraordinary items. The fee is based on fund average daily net assets and is calculated and accrued daily. The fee for the fund for the most recent fiscal year was 1.05%.

In addition, from time to time, T. Rowe Price International may make payments from its own resources to eligible insurance companies for recordkeeping and administrative services they provide to the fund for contract holders. These payments range from 0.15% to 0.25% of the average annual total assets invested by the separate accounts of the insurance company in the fund. T. Rowe Price may also reimburse insurance companies, broker-dealers, and other distributors for certain bona fide selling expenses associated with distribution of the insurance contracts in which the fund serves as an investment option. All payments described by this paragraph are paid by T. Rowe Price and not by the fund. As a result, the total expense ratio of the fund will not be affected by any such payments.

A discussion about the factors considered by the Board and its conclusions in approving the fund's investment management contract with T. Rowe Price International appears in the fund's semiannual report to contract holders for the period ended June 30.

Variable Annuity and Variable Life Charges

Variable annuity and variable life fees and charges imposed on contract holders and participants by the insurance companies are in addition to those described previously and are described in the variable annuity and variable life contract prospectuses.

Variable Annuity and Variable Life Conflicts

The fund may serve as an investment medium for both variable annuity contracts and variable life insurance policies. Shares of the fund may be offered to separate accounts established by any number of insurance companies. The fund currently does not foresee any disadvantages to variable annuity contract owners due to the fact that the fund may serve as an investment medium for both variable life insurance policies and annuity contracts; however, due to differences in tax treatment or other considerations, it is theoretically possible that the interests of owners of annuity contracts and insurance policies for which the fund serves as an investment medium might at some time be in conflict. The fund's Board of Directors is required to monitor events to identify any material conflicts between variable annuity contract owners and variable life policy owners, and will determine what action, if any, should

be taken in the event of such a conflict. If such a conflict were to occur, an insurance company participating in the fund might be required to redeem the investment of one or more of its separate accounts from the fund. This might force the fund to sell securities at disadvantageous prices.

UNDERSTANDING PERFORMANCE INFORMATION

This section should help you understand the terms used to describe fund performance. You may see these terms used in shareholder reports you receive from your insurance company.

Total Return

This tells you how much an investment has changed in value over a given period. It reflects any net increase or decrease in the share price and assumes that all dividends and capital gains (if any) paid during the period were reinvested in additional shares. Therefore, total return numbers include the effect of compounding.

Advertisements may include cumulative or average annual total return figures, which may be compared with various indices, other performance measures, or other mutual funds.

Cumulative Total Return

This is the actual return of an investment for a specified period. A cumulative return does not indicate how much the value of the investment may have fluctuated *during* the period. For example, an investment could have a 10-year positive cumulative return, despite experiencing some years of negative returns during that time.

Average Annual Total Return

This is always hypothetical and should not be confused with actual year-by-year results. It smoothes out variations in annual performance to tell you what *constant* year-by-year return would have produced the investment's actual cumulative return. This gives you an idea of an investment's annual contribution to your portfolio, provided you held it for the entire period.

Total returns quoted for the fund include the effect of deducting the fund's expenses, but may not include charges and expenses attributable to any particular insurance product. Since you can only purchase shares of the fund through an insurance product, you should carefully review the prospectus of the insurance product you have chosen for information on relevant charges and expenses. Excluding these charges from quotations of the fund's performance has the effect of increasing the performance quoted.

INVESTMENT POLICIES AND PRACTICES

This section takes a detailed look at some of the types of fund securities and the various kinds of investment practices that may be used in day-to-day portfolio management. Fund investments are subject to further restrictions and risks described in the Statement of Additional Information.

Shareholder approval is required to substantively change fund objectives. Shareholder approval is also required to change certain investment restrictions noted in the following section as "fundamental policies." Portfolio managers also follow certain "operating policies" that can be changed without shareholder approval. Shareholders will receive at least 60 days' prior notice of a change in the policy requiring the fund to normally invest at least 80% of net assets in common stocks of non-U.S.

companies. Fund investment restrictions and policies apply at the time of purchase. A later change in circumstances will not require the sale of an investment if it was proper at the time it was made. (This exception does not apply to the fund's borrowing policy.)

Fund holdings of certain kinds of investments cannot exceed maximum percentages of total assets, which are set forth in this prospectus. For instance, fund investments in certain derivatives are limited to 10% of total assets. While these restrictions provide a useful level of detail about fund investments, investors should not view them as an accurate gauge of the potential risk of such investments. For example, in a given period, a 5% investment in derivatives could have significantly more of an impact on a fund's share price than its weighting in the portfolio. The net effect of a particular investment depends on its volatility and the size of its overall return in relation to the performance of all other fund investments.

Changes in fund holdings, fund performance, and the contribution of various investments are discussed in the shareholder reports sent to you by your insurance company.

- ▶ ***Fund managers have considerable discretion in choosing investment strategies and selecting securities they believe will help achieve fund objectives.***

Types of Portfolio Securities

In seeking to meet its investment objective, fund investments may be made in any type of security or instrument (including certain potentially high-risk derivatives described in this section) whose investment characteristics are consistent with its investment program. The following pages describe various types of fund securities and investment management practices.

Diversification As a fundamental policy, the fund will not purchase a security if, as a result, with respect to 75% of its total assets, more than 5% of the fund's total assets would be invested in securities of a single issuer or more than 10% of the outstanding voting securities of the issuer would be held by the fund.

Fund investments are primarily in common stocks and, to a lesser degree, other types of securities as described below.

Common and Preferred Stocks

Stocks represent shares of ownership in a company. Generally, preferred stock has a specified dividend and ranks after bonds and before common stocks in its claim on income for dividend payments and on assets should the company be liquidated. After other claims are satisfied, common stockholders participate in company profits on a pro-rata basis; profits may be paid out in dividends or reinvested in the company to help it grow. Increases and decreases in earnings are usually reflected in a company's stock price, so common stocks generally have the greatest appreciation and depreciation potential of all corporate securities. While most preferred stocks pay a dividend, a fund may decide to purchase preferred stock where the issuer has omitted, or is in danger of omitting, payment of its dividend. The fund may purchase American Depositary Receipts (ADRs) and Global Depositary Receipts (GDRs), which are certificates evidencing ownership of shares of a foreign issuer. ADRs and GDRs trade on established markets and are alternatives to directly purchasing the underlying foreign securities in their local markets and currencies. Such investments are subject to many of the same risks associated with investing directly in foreign securities.

Convertible Securities and Warrants

Investments may be made in debt or preferred equity securities convertible into, or exchangeable for, equity securities. Traditionally, convertible securities have paid dividends or interest at rates higher than common stocks but lower than nonconvertible securities. They generally participate in the appreciation or depreciation of the underlying stock into which they are convertible, but to a lesser degree

than common stock. Some convertible securities combine higher or lower current income with options and other features. Warrants are options to buy, directly from the issuer, a stated number of shares of common stock at a specified price anytime during the life of the warrants (generally, two or more years). Warrants can be highly volatile, have no voting rights, and pay no dividends.

Fixed-Income Securities

From time to time, the fund may invest in corporate and government fixed-income securities. These securities would be purchased in companies that meet fund investment criteria. The price of a fixed-income security fluctuates with changes in interest rates, generally rising when interest rates fall and falling when interest rates rise.

Hybrid Instruments

These instruments (a type of potentially high-risk derivative) can combine the characteristics of securities, futures, and options. For example, the principal amount, redemption, or conversion terms of a security could be related to the market price of some commodity, currency, securities, or securities index. Such securities may or may not bear interest or pay dividends. Under certain conditions, the redemption value of a hybrid could be zero.

► ***Hybrids can have volatile prices and limited liquidity, and their use may not be successful.***

Operating policy Fund investments in hybrid instruments are limited to 10% of total assets.

Illiquid Securities

Some fund holdings may be considered illiquid because they are subject to legal or contractual restrictions on resale or because they cannot be sold in the ordinary course of business at approximately the prices at which they are valued. The determination of liquidity involves a variety of factors. Illiquid securities may include private placements that are sold directly to a small number of investors, usually institutions. Unlike public offerings, such securities are not registered with the Securities and Exchange Commission (SEC). Although certain of these securities may be readily sold, for example under Rule 144A of the Securities Act of 1933, others may have resale restrictions and be illiquid. The sale of illiquid securities may involve substantial delays and additional costs, and the fund may only be able to sell such securities at prices substantially less than what the fund believes they are worth.

Operating policy Fund investments in illiquid securities are limited to 15% of net assets.

Types of Investment Management Practices

Reserve Position

A certain portion of fund assets will be held in reserves. Fund reserve positions can consist of: 1) shares of one or both of the T. Rowe Price internal money funds; 2) short-term, high-quality U.S. and foreign dollar-denominated money market securities, including repurchase agreements; and 3) U.S. dollar or non-U.S. dollar currencies. For temporary, defensive purposes, there is no limit on a fund's holdings in reserves. If a fund has significant holdings in reserves, it could compromise the fund's ability to achieve its objectives. The reserve position provides flexibility in meeting redemptions, paying expenses, and in the timing of new investments and can serve as a short-term defense during periods of unusual market volatility. Non-U.S. dollar reserves are subject to currency risk.

Borrowing Money and Transferring Assets

The fund may borrow from banks and other T. Rowe Price funds for temporary emergency purposes to facilitate redemption requests, or for other purposes consistent with fund policies as set forth in this prospectus. Such borrowings may be collateralized with fund assets, subject to restrictions.

Fundamental policy Borrowings may not exceed 33¹/₃% of total assets.

Operating policy Fund transfers of portfolio securities as collateral will not be made except as necessary in connection with permissible borrowings or investments, and then such transfers may not exceed 33¹/₃% of total assets. Fund purchases of additional securities will not be made when borrowings exceed 5% of total assets.

Foreign Currency Transactions

The fund will normally conduct its foreign currency exchange transactions, if any, either on a spot (i.e., cash) basis at the spot rate prevailing in the foreign currency exchange market, or through entering into forward contracts to purchase or sell foreign currencies. The fund will generally not enter into a forward contract with a term greater than one year.

The fund will generally enter into forward foreign currency exchange contracts only under two circumstances. First, the fund may “lock in” the U.S. dollar price of the security when it enters into a contract for the purchase or sale of a security denominated in a foreign currency. Second, when T. Rowe Price International believes that the currency of a particular foreign country may move substantially against another currency, it may enter into a forward contract to sell or buy the former foreign currency (or another currency that acts as a proxy for that currency). The contract may approximate the value of some or all of the fund’s portfolio securities denominated in such foreign currency. Under unusual circumstances, the fund may commit a substantial portion or the entire value of its portfolio to the consummation of these contracts. T. Rowe Price International will consider the effect such a commitment to forward contracts would have on the fund’s investment program and the flexibility of the fund to purchase additional securities. Although forward contracts will be used primarily to protect the fund from adverse currency movements, they also involve the risk that anticipated currency movements will not be accurately predicted, and fund total return could be adversely affected as a result.

There are some markets where it is not possible to engage in effective foreign currency hedging. This is generally true, for example, for the currencies of various emerging markets where the foreign exchange markets are not sufficiently developed to permit hedging activity to take place.

Futures and Options

Futures, a type of potentially high-risk derivative, are often used to manage or hedge risk because they enable the investor to buy or sell an asset in the future at an agreed-upon price. Options, another type of potentially high-risk derivative, give the investor the right (when the investor purchases the option), or the obligation (when the investor “writes” or sells the option), to buy or sell an asset at a predetermined price in the future. Futures and options contracts may be bought or sold for any number of reasons, including: to manage exposure to changes in securities prices and foreign currencies; as an efficient means of increasing or decreasing a fund’s exposure to certain markets; in an effort to enhance income; to protect the value of portfolio securities; and to serve as a cash management tool. Call or put options may be purchased or sold on securities, futures, financial indices, and foreign currencies.

Futures contracts and options may not always be successful hedges; their prices can be highly volatile; using them could lower fund total return; and the potential loss from the use of futures can exceed a fund’s initial investment in such contracts.

Operating policies Initial margin deposits on futures and premiums on options used for non-hedging purposes will not exceed 5% of net asset value. The total market value of securities covering call or put options may not exceed 25% of total assets. No more than 5% of total assets will be committed to premiums when purchasing call or put options.

Tax Consequences of Hedging

Hedging may result in the application of the mark-to-market and straddle provisions of the Internal Revenue Code. These provisions could result in an increase (or decrease) in the amount of taxable dividends paid by the fund and could affect whether dividends paid are classified as capital gains or ordinary income.

Lending of Portfolio Securities

A fund may lend its securities to broker-dealers, other institutions, or other persons to earn additional income. Risks include the potential insolvency of the broker-dealer or other borrower that could result in delays in recovering securities and capital losses. Additionally, losses could result from the reinvestment of collateral received on loaned securities in investments that default or do not perform as expected.

Fundamental policy The value of loaned securities may not exceed 33¹/₃% of total assets.

Portfolio Turnover

Turnover is an indication of frequency of trading. The fund will not generally trade in securities for short-term profits, but, when circumstances warrant, securities may be purchased and sold without regard to the length of time held. Each time the fund purchases or sells a security, it incurs a cost. This cost is reflected in the fund's net asset value but not in its operating expenses. The higher the turnover rate, the higher the transaction costs and the greater the impact on the fund's total return. Higher turnover can also increase the possibility of taxable capital gain distributions. The fund's portfolio turnover rates are shown in the Financial Highlights table.

Country Classifications

For purposes of determining whether a particular country is considered a developed market or an emerging market, the fund uses the designation set forth by MSCI Barra, a prominent provider of investment tools and data services for institutions worldwide. For purposes of determining whether a fund invests at least 80% of its net assets in a particular country or geographic region, the fund uses a country assigned to a security by MSCI Barra or another unaffiliated third party data provider. The fund generally follows this same process with respect to the remaining 20% of assets but may occasionally make an exception after assessing various factors relating to a company.

DISCLOSURE OF FUND PORTFOLIO INFORMATION

The fund's portfolio holdings are disclosed on a regular basis in its semiannual and annual reports to shareholders and on Form N-Q, which is filed with the SEC within 60 days of the fund's first and third fiscal quarter-end. In addition, the fund discloses its calendar quarter-end portfolio holdings on troweprice.com 15 calendar days after each quarter. Under certain conditions, up to 5% of the fund's holdings may be included in this portfolio list without being individually identified. Generally, securities would not be individually identified if they are being actively bought or sold and it is determined that the quarter-end disclosure of the holding could be harmful to the fund. A security will not be excluded for these purposes from a fund's quarter-end holdings disclosure for more than one year. The fund also discloses its largest 10 holdings on troweprice.com on the seventh business day after each month-end. These holdings are listed in alphabetical order along with the aggregate percentage of the fund's total assets that they represent. The quarter-end portfolio will remain on the Web site for one year. Each monthly top 10 list will remain on the Web site for six months. A description of the fund's policy and procedures with respect to the disclosure of portfolio information is in the Statement of Additional Information.

FINANCIAL HIGHLIGHTS

Table 3, which provides information about the fund's financial history, is based on a single share outstanding throughout the periods shown. The table is part of the fund's financial statements, which are included in its annual report and are incorporated by reference into the Statement of Additional Information (available upon request). The total returns in the table represent the rate that an investor would have earned or lost on an investment in the fund (assuming reinvestment of all dividends and distributions and no payment of account or [if applicable] redemption fees). The financial statements in the annual report were audited by the fund's independent registered public accounting firm, PricewaterhouseCoopers LLP.

Table 3 Financial Highlights

	<i>Year ended December 31</i>				
	<i>2004</i>	<i>2005*</i>	<i>2006*</i>	<i>2007*</i>	<i>2008*</i>
Net asset value, beginning of period	\$ 11.94	\$ 13.44	\$ 15.31	\$ 17.97	\$ 17.71
Income From Investment Operations
